

Lemma's disambiguation

Abstract

This file provides an example of lemma's disambiguation.

All word which can potentially be twice (or more) in a same line is marked by an `\sameword`. *Eledmac* print the word rank only if the word is effectively printed twice (or more) time in the same line.

For use with `\lemma`, please read the handbook.

```
1      Leo aut ursus aut oryx aut ricinus aut equus aut lupus aut canis aut felix aut asinus
2  aut burricus.
```

```
1 aut6] et
2 aut] et
```

```
1 aut6] monotone...
```
